PROFESSIONAL SUMMARY

Full Stack Engineer specializing in building scalable, production-grade web applications using React.js and Node.js. Experienced in designing dynamic systems, optimizing performance, and integrating AI-driven features. Strong focus on system design, real-time data handling, and deploying reliable, high-performance products. Passionate about solving real-world engineering problems in fast-paced startup environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, SQL
Frontend: React.js, Next.js, Tailwind CSS, Redux, Responsive UI/UX
Backend: Node.js, Express.js, REST APIs, JWT Authentication
Databases: MongoDB, MySQL
DevOps & Tools: Docker, AWS, GitHub Actions, CI/CD, Vercel, Render
Core Concepts: System Design, API Design, Caching, Async Processing, Debugging

WORK EXPERIENCE

Frontend Developer Intern May 2025 - Aug 2025
Growthzi | Remote

- Architected dynamic UI logic using React and Context API, improving product usability by 40% and reducing support queries.
- Built a modular no-code website builder interface with scalable dashboard architecture and reusable component systems.
- Integrated REST APIs with real-time state updates, ensuring consistent data flow and improving frontend performance under dynamic workloads.

PROJECTS

API Forge — GenAI API Workspace & Mocking Engine (SaaS) Apr 2026 - Present
Tech Stack: Node.js, Express.js, MongoDB, Redis, BullMQ, Docker, React.js, Tailwind CSS

- Built a multi-tenant API mocking platform that generates schemas from natural language and dynamically creates REST endpoints for real-time testing.
- Designed a modular backend with dynamic routing and request processing, using caching and async job handling to improve performance and scalability.
- Implemented secure access, rate limiting, and containerized deployment, ensuring production-ready architecture for handling concurrent API workloads.

Mojo — AI-Powered Mood Journal System Feb 2025 – Apr 2025
Tech Stack: React.js, Node.js, Express.js, MongoDB, Machine Learning, REST APIs, CI/CD, Cloud Deployment

- Developed and deployed a full-stack application that analyzes user mood data and delivers personalized activity recommendations using ML logic.
- Designed efficient REST APIs and database workflows to support real-time dashboards and seamless user experience.
- Implemented authentication, optimized state management, and production deployment pipelines to ensure performance and reliability.

EDUCATION

MCT's Rajiv Gandhi Institute of Technology
Bachelor of Engineering in Computer Engineering – 8.45/10 2022 - 2026

EXTRACURRICULAR

- Codertine Coding Contest (2025) – Solved competitive DSA challenges in a timed coding round.
- Startup Battle Winner (2025) – Pitched and won 1st place for a scalable tech startup idea.
